

ЗАМЕТКИ

Expansion of *Plecotus austriacus* (Chiroptera, Vespertilionidae) Range: First Records in the Kyiv Oblast (Ukraine) [Расширение ареала *Plecotus austriacus*: первые находки в Киевской области (Украина)]. — There are two species of long-eared bats in fauna of Ukraine: *Plecotus auritus* (Linnaeus, 1758) and *Plecotus austriacus* (Fischer, 1829) (Загороднюк и др., 2002). *P. auritus* range covers the biggest part of Ukraine, with the exception of west-south of the steppe zone. Registrations of *P. austriacus* in Ukraine, till recently, have concerned to the Carpathian region, Volynian-Podolian Upland (its western and southern parts) and the Black Sea Region (Загороднюк и др., 2002; Загороднюк, Годлевская, 2001; Годлевская и др., 2009; Годлевська та ін., 2010; Годлевская и др., 2011). In 2008 and 2009, *P. austriacus* was found out of the zone of its known (and assumed) distribution in Ukraine — in Cherkasy Oblast, Central Ukraine (Билушенко, 2009). In 2011, we found *P. austriacus* for the first time in the Kyiv Oblast. Two individuals of this species were netted at the territory of Lysogorsky Fort of Novo-Pecherska Fortress in Kyiv (N50° 24' ; E30° 33'): 1M was caught with a mist-net on 25.08.2011 at entrance to the rampart mine N 1 (besides, on this date here 1M *Myotis daubentonii* and 3M *P. auritus* were caught); 1M was caught on 27.08.2011 with a mist-net at entrance to the mine N 7 (additionally to: 7M and 1F *M. daubentonii*, 2M *P. auritus* and 1M *Eptesicus serotinus*). Kyiv record point of *P. austriacus* is located a significant distance from the nearest registration points of the species: 170 km northward of the one in the Cherkasy Oblast; 250–470 km to the north and the north-east from other registration points in Central and Western Ukraine. By the sum of available data the recent records may be considered as the evidence of the continued broadening of *P. austriacus* range. — **E. V. Godlevskaya** (I. I. Schmalhausen Institute of Zoology NAS of Ukraine).

Первая находка *Tricladia humilis* (Hymenoptera, Encyrtidae) в Украине [The First Record of *Tricladia humilis* (Hymenoptera, Encyrtidae) in Ukraine]. — Особи *T. humilis* Mercet, 1918 собраны кошением в Киеве: 27 ♀ и 14 ♂, Парк Дружбы народов, о-в Муромец, 7 и 9.06.2011 (А. Прохоров) (ИЗШК). Род *Tricladia* Mercet, 1918 монотипический. Ранее был известен из Испании и бывшей Чехословакии. Биология неизвестна. Почти все представители подсемейства Tetracneminae Howard, к которому относится род *Tricladia* (Hymenoptera, Pseudococcidae) — паразитоиды мучнистых червецов. — **С. А. Симутник, А. В. Прохоров** (Институт зоологии им. И. И. Шмальгаузена НАН Украины, Киев).
